

DUALTECH
Next generation alarm communication

Install a good deal. For safety's sake.

Analog alarm systems don't have to become outmoded. By digitalising existing installations with the help of our certified DALM security router, additional and more flexible security solutions are created.

Our cloud-based platform EasyWebManager means that you, as a security systems installer, are able to offer a faster service and a range of new services. In other words, alarm communication via the Internet opens up completely new business opportunities, while there's no need for the customer to spend a lot of money on a new digital alarm system.

Turn the page to see what services you can offer your customers!

Select the desired service level for your offer.

Dualtech's cloud-based platform EasyWebManager is a tool that allows you to combine different service packages based on the customer's requirements. At the same time, it's easy to monitor the installation at a distance, which is far more efficient and creates bigger margins. Not only will you avoid lots of travelling, the customer will get a faster service and more functions.

You can select different levels of your service offer. EasyWebManager 2.0 Bas offers all the basic functions, while EasyWeb-Manager 2.0 PRO provides a platform for significantly more services and a long-term business relation with the customer.

FUNCTIONS

 EagleEye	 EagleEye camera
 Subcontractor	 Remote service
 EagleEye notification	 Remote control

EasyWebManager 2.0 PRO is a powerful tool for programming, start-up and basic management of the DALM security router. In addition, it provides access to advanced functions for sorting, grouping and searches.

PRO also includes the new feature EagleEye – your cloud-based modern alarm service centre. You have full control over all your customers' digitalised security systems via a smartphone, tablet or computer.

EagleEye also offers a range of extra services that increase the customer's security and create new business opportunities. The Secure SIM administration service registers the system's Secure SIM-card automatically in EWM.

FUNCTIONS

 EagleEye	 EagleEye camera
 Subcontractor	 Remote service
 EagleEye notification	 Secure SIM administration

EasyWebManager 2.0 BASIC is a powerful tool for programming, start-up and basic management of DALM security router.

The Secure SIM administration service registers the system's Secure SIM-card automatically in EWM. You have full control over all the customers' Secure SIM-cards via the web portal.
