

Get a total overview over your alarm system.

The EagleEye service means that you enjoy total control over your security installation via our alarm service centre. You can also get direct information from the alarm directly to your smartphone, tablet or computer via an app.

The alarm service centre handles the receipt of alarms as well as operational information. Via your app you can easily monitor the alarm. In addition, various services can be connected, such as camera monitoring, turning the alarm on/off or controlling heating and lighting. All conveniently via your smartphone, tablet or computer.

EAGLEEYE

- A web-based alarm service centre offering additional services
- More secure and efficient than a traditional solution via the telephone network
- You get direct information in real-time and can control the system's functions remotely via an app

Control day to day functions directly via your mobile.

The Remote control service gives you a range of functions for a more efficient monitoring, but also in order to control heating or lighting, for example, in your home or business.

Obviously, it's easy to turn the alarm on or off via the Remote control app. In the same manner, you can also, for example, open and lock the gate, or raise or lower the boom barrier into the company's territory. It is equally easy to control other technical installations, such as pumps or fans.

The lighting or heating at home can also be managed via your smartphone, tablet or computer – and why not make sure the sauna is hot when you return home from a cold winter walk.

REMOTE CONTROL

- Control additional functions via an app
- Lighting, heating, locks and technical installations
- Conveniently via your smartphone, tablet or computer

Receive images directly from the alarm system.

The Camera service means that you can easily connect cameras to your alarm and receive images directly from your home, company or an individual facility. You can connect up to four still cameras.

The images are managed in our web-based alarm service centre and via an app you get an overview directly in your smartphone, tablet or computer, together with up to date operational information and event reporting.

The images provide additional security for your home or company and you can see directly if something doesn't look right.

The cameras are also a smart way of monitoring important technical installations such as ventilation systems or a pump house.

If you wish, we can also look at the images sent and take prompt action.

CAMERA

- Connect up to four still cameras.
- The images are managed by our web-based alarm service centre and may be viewed directly via an app in your smartphone, tablet or computer
- The images provide additional security for both your home or company
- Perfect for monitoring of important installations

Faster support thanks to remote service.

With Remote service we can manage your alarm system fast, remotely. You get a faster service while we are kinder to the environment, because we can minimise trips to your security system.

We connect to your system via the security router and can for example help to turn the alarm on or off within entire or parts of sections, or add or remove alarm receivers.

In the same manner, we can carry out diagnoses and take a range of different actions. If for example there is a change in the insurance company requirements for your security installation, we can, via remote service, easily upgrade your security router.

REMOTE SERVICE

- Faster remote service
- Less environmental impact

Receive the alarm directly via e-mail or mobile.

Notification is a service which makes it possible for you to receive the alarm directly sent via e-mail or Push.

If you wish, you may specify several alarm recipients - such as a neighbour who is at home while you are working or on vacation. Similarly, the alarm can go directly to our service technician who will act fast, providing you with even greater security.

NOTIFICATION

- Increased security with a direct alarm via e-mail or Push
- Possibility of adding several recipients

Secure function with secure SIM card

Your security router requires a SIM-card for you to be able to benefit from all digital services and functions in your alarm system. Secure SIM is a secure and tailored solution which, thanks to a roaming function, provides you with maximum accessibility via mobile networks throughout Europe.

We have prepared a 24-month contract in collaboration with an operator, maximising functionality and simplicity. The secure SIM card is connected to your individual alarm installation and cannot be confused with other mobile subscriptions within the household or company.

In addition to facilitating a range of different services, the mobile connection means that there is also a secure backup for the alarm functions, in case your Internet connection should, for some reason, be subject to an operational disruption.

We have control over your SIM card via our alarm service centre. When the subscription is about to run out, we can conveniently extend the contract for your card after touching base with you.

SECURE SIM

- Tailored solution in cooperation with an operator
- Maximum accessibility via mobile networks throughout Europe
- Secures your alarm communication

We look after your alarm system.

Via the Safe control service, you can instruct us to continuously monitor the operation of your security system. We make sure everything functions as it should and where needed take the required action, after confirming with you.

Safe control is a solution if you want full security, but don't want to control your alarm system yourself via your smart-phone, tablet or computer.

Instead, you let us take responsibility for taking action in case something is not right. This means you get a reliable and trouble-free security installation.

With Safe control you can also get day to day summaries with operational information from us.

SAFE CONTROL

- We take total responsibility for operational monitoring of your security system.
- We take the required action after confirming with you.
- Convenient, easy and secure
